

YCM7E

ELECTRONIC MOULDED CASE CIRCUIT BREAKER

- High-end surface design
- Highly intelligent chip control
- Separate cover structure

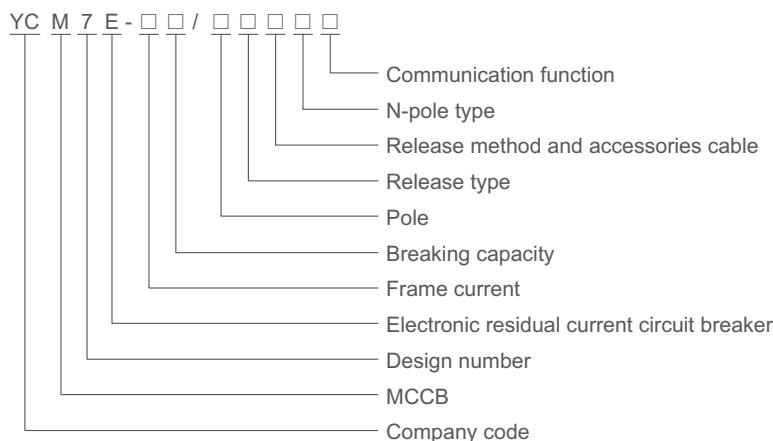

▼ Product overview

YCM7E series electronic moulded case circuit breaker, suitable for AC 50/60Hz, its rated insulation voltage is 800V, rated operating voltage is 400V, rated operating current to 800A in the circuit with overload, long delay inverse time, short circuit short delay inverse time, short circuit short delay fixed time, short circuit instantaneous, can protect lines and power equipment from damage;

The protection features of circuit breaker are complete and accurate, which can improve the reliability of power supply and avoid unnecessary power outage, among which, the controller with a communication interface can be "four remote" to meet the requirements of the control center and automation system.

▼ Product model and meaning

Communication function	Blank: without; H: with
N-pole type	A: Always connected; B: Have breakpoint
Application code	Blank: power distribution; 2: motor protection
Accessory	00: No accessories; 08: Alarm; 10: Shunt; 20: Auxiliary; 30: Undervoltage; 40: Shunt + auxiliary; 50: Shunt + undervoltage 60: Two groups of auxiliary; 70: Undervoltage + auxiliary; 18: Shunt + alarm; 28: Auxiliary + alarm; 38: Undervoltage + alarm; 48: Shunt + Auxiliary + alarm; 68: Double auxiliary + alarm; 78: Undervoltage + auxiliary + alarm
Release type	3: Electronic release
Pole	3:3P; 4:4P
Breaking capacity	M: Higher type; H: High type
Frame current	125, 250, 400, 630(Capacity-increase type), 630, 800
Standard	IEC 60947-2
Certification	CE

▼ Main features

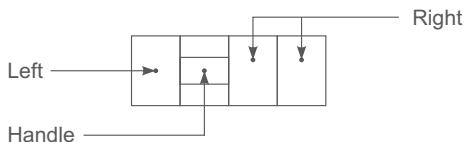

1. Selectivity coordination: YCM7E electronic moulded case circuit breaker has three-section protection function, the circuit breaker of category B and other short-circuit protection devices connected in the same circuit has selective coordination function under short circuit condition;
2. With three sections of protect action current, action time selection: the user can set and adjust the release according to the load current requirements;
3. Self-power supply: the electronic release provides energy by the circuit breaker itself, and the current signal and the working power of the release come from the current transformer installed in the circuit breaker;
4. With "pre-alarm" indicator: when the actual operating current flowing through the circuit breaker reaches or exceeds the pre-alarm current Iro, the "pre-alarm" light emitting diode indicator on the cover of the circuit breaker is yellow;
5. With overload indication: When the load current exceeds the overload long delay current, the light emitting diode on the cover of circuit breaker is red;
6. High current instantaneous release function: When the circuit breaker is closed or in operation, in case of short circuit high current (>20Inm), the circuit breaker is directly released by the electromagnetic release mechanism

Protection

1. Overload long delay action current I_{r1} adjustment, according to the different rated current of the circuit breaker, can be adjusted from 4 to 10;
2. Long delay action time t_1 adjustment, can be adjusted for 4 levels;
3. Short-circuit short-delay action current I_{r2} adjustment, can be adjusted for 10 levels;
4. Short delay action time t_2 adjustment, can be adjusted for 4 levels;
5. Short-circuit instantaneous action current I_{r3} adjustment, can be adjusted for 8, 9 or 10 levels;
6. Forecast alarm action current I_{ro} adjustment, can be adjusted for 7 levels.

▼ Electronic release characteristic

Long delay overcurrent protection inverse time action characteristics

Current	Action time																	
Distribution	1.05Ir1	No action within 2 hours																
	1.3Ir1	$\leq 1\text{h}$ action																
	2Ir1	Setting time t1(s)	Inm=125, 250A				Inm=400, 630, 800A											
Motor protection	1.05Ir1	No action within 2 hours																
	1.2Ir1	$\leq 1\text{h}$ action																
	1.5Ir1	Action time T1(s)	Inm=125, 250A				Inm=400, 630, 800A											
	2Ir1		21.3	107	142	178	21.3	107	178	267								
	7.2Ir1		12	60	80	100	12	60	100	150								
	Release class		0.93	4.63	6.17	7.72	0.93	4.63	7.72	11.6								
		-	10	10	20	-	10	20	30									

Note: 1. The operation time conforms to $T=(2\times Ir1/I)^2\times t1(1.2Ir1\leq I\leq Ir2)$;2. Operation time tolerance is $\pm 20\%$; 3. The return time is not less than 70% of the action time.

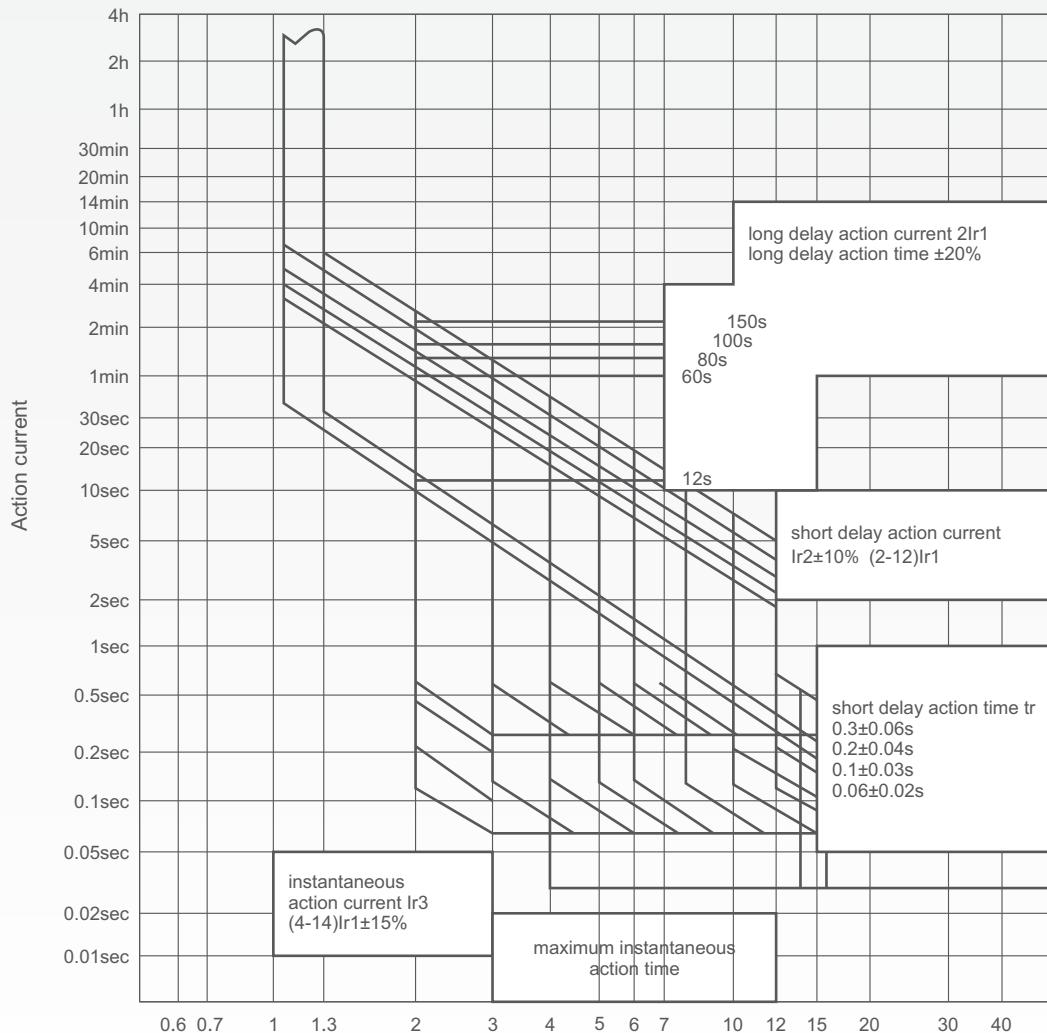

Short delay overcurrent protection characteristics

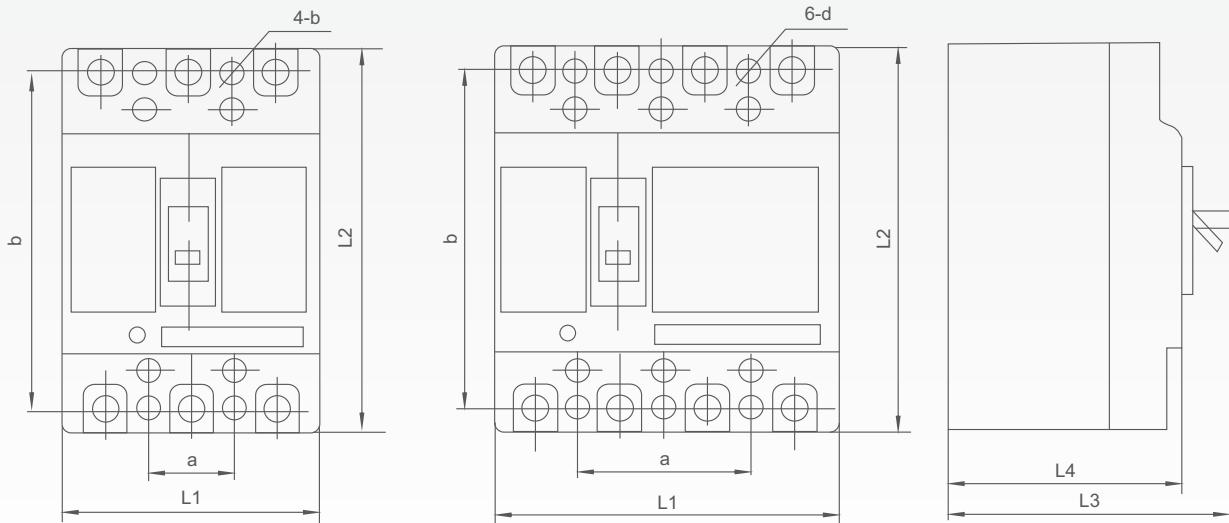

Current	Action time							
Ir2 $\leq I < 1.5Ir2$	Inverse time				$I^2T2=(1.5Ir2)^2t2$			
1.5Ir2 $\leq I < Ir3$	Fixed time	Setting time t2(s)	0.06		0.1	0.2		0.3
		Tolerance(s)	± 0.02		0.03	± 0.04		± 0.06
		Returnable time(s)				0.14		0.21

Note: Inverse time tolerance is $\pm 20\%$.

▼ Electronic release characteristic

With overload long delay inverse time, short circuit short delay inverse time, short circuit short delay fixed time, short circuit instantaneous action and other protection functions, can be set by the user to form the required protection characteristics; Neutral line overcurrent protection current and time parameters 100% automatic tracking phase line setting. The release characteristic is shown in the following figure.

▼ Order instruction

- Customers need to indicate the model, specifications and functional requirements when ordering, if the selection data is not involved in the technical requirements, please contact the company's sales staff.
 For example: to order YCM7E series 400 shell frame; 3 poles; Breaking: M type;
 Release method: electronic release, with auxiliary contact and shunt communication function; Rated current: 400A; AC220V; Quantity 100pcs.
- Order model: YCM7E-400M/3340H 400A AC220V 100pcs.
